

# sendwithus WordPress Plugin

by Introverted Wizards

The sendwithus WordPress plugin allows WordPress site administrators to easily enable transactional email capabilities within their existing WordPress installations.

With the power of the sendwithus WordPress plugin, site administrators can easily send transactional emails that make use of A/B testing, drip campaigns, easy to create templates, and a set of powerful analytical tools.

**Dylan Moore** contributed to the project as a developer. He spent the majority of his time structuring and co-developing the backend with his partners.

When not at his laptop, Dylan can often be found covered in flour, trying in vain to keep his bagels from growing too big. He also enjoys reading non-fiction, particularly in the areas of biology and critical thinking.

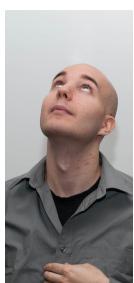

After receiving his diploma, Dylan hopes to move to Vancouver and find work as a web developer.

**Kyle Poole** contributed to the project as project manager. He helped to coordinate the completion of tasks while also actively developing the UI and backend code.

When not indulging his passion for technology, Kyle tries to get as far away from it as possible. He accomplishes this through running, cycling, and surfing.

With the completion of the Computer Systems Technology program, Kyle is looking forward to working with a local software developer in a team-based environment.

**Cory Purnell** contributed to the project as a problem solver and developer. He actively developed the backend and solved issues that arose throughout the process.

In his spare time, Cory enjoys working on musical endeavors as well as watching and playing competitive video games.

After completing the Computer Systems Technology program, Cory is hoping to have a career in software or web development.

Introverted Wizards would like to thank the following for their contributions to the success of the project:

- sendwithus for giving us the chance to work on the project.
- Camosun College for coordinating the Capstone program.
- Deryk Barker for being our faculty supervisor during the documentation phase.
